## ESD Diodes

ESD protection for all of the externally accessible nets.

## +3V3 LDO Regulators

Regulators for generating independent power rails for the microcontroller and the user interface.

Board Identification

Grid firmware can identify the hardware and the board revision through a 3 wire serial interface using one or more shift register as read only memory. The content of the memory is defined by pulling the inputs high or low through pcb traces or solderable configuration jumpers.

4b'Model + 4b'Revision + nb'Reserved (Multiple shift registers)

D0: MODEL (LSB)
