The schematic diagram illustrates the hardware configuration for board identification. Key components include:

- U801 (74HC165)**: An 8-bit parallel input serial output shift register.
- JP701 (NF)**: A jumper labeled "CLOSED IF PB44".
- JP801 (NF)**: A jumper labeled "OPEN IF BU16".
- R702 (5k1)**: A resistor connected to JP701.
- R801 (5k1)**: A resistor connected to JP801.
- C801 (100n)**: A capacitor connected to the HWCFG_HIGH signal line.

Board Identification

Grid firmware can identify the hardware and the board revision through a 3 wire serial interface using one or more shift register as read only memory. The content of the memory is defined by pulling the inputs high or low through pcb traces or solderable configuration jumpers.
